Security Information & Event Management

Protect your company's most valuable assets with network monitoring that is human driven and technology assisted.

Our **Security Information and Event Management (SIEM)** platform uses advanced detection technology and a team of **unrivaled dedicated security analysts** to provide protection around the clock and integrate seamlessly into your team. Our goal is to **protect your data, your brand, and your people.**

The **Process**

Our security analysts provide detection and response every second of every minute of every day. Our security analysts are trained to understand and identify what real indicators of compromise are and how they can negatively impact your business. Our experience gives us enhanced visibility and knowledge to detect and address rapidly evolving threats through our Security Operations Center.

Endpoint Detection & Response

Protecting your laptops, workstations, and servers through **unrivaled** technology and experienced **security analysts.**

Fully Managed **Endpoint Detection and Response** solution focusing on behaviors that **detect attackers instead of relying merely on traditional, signature-based detection methods.** We provide **real time detection** and incident management to protect your most critical assets – laptops, desktops, and servers.

The **Process**

Without adding costly hardware, resource intensive software, or extra personnel, we deploy nano agents across your environments that will provide essential data to our Security Operations Center (SOC) 24x7x365. You receive customized reports tailored to your needs; we believe swift action takes clear communication.

Counter**intelligence**

You cannot stop people from targeting your organization, but you can at least **ensure that you are prepared** when threats do arise.

Our **Counterintelligence Team** gathers information and conducts operations to identify threats to an organization so that they can better protect against malicious activity. We accomplish this by combining advanced technology with skilled and experienced intelligence specialists. **Our goal is to protect your data, your brand and your people.**

The **Process**

We utilize advanced and automated scraping techniques to search the darknet, Internet and social media for threat indicators as well as sensitive information that could negatively impact your business. We compile and analyze the information, determine the level of threat and deliver the finalized intelligence report to you through our online service. **Not only do you receive current threat updates, but useful threat intelligence tools for your staff.**
